## PROJECT

### Determination of Treatment Discontinuation in Cancer Patients

Aug 2021

*Published Paper*

- To prevent the possibility of adverse reaction based on treatment method, I optimized machine learning algorithm using a metaheuristic algorithm.
- The model discontinued wrong treatment of 15 out of 104 patients compared to 10 discontinuation in previous publications.

### Bioactive Molecular Compound Prediction using Stacking and Voting ensemble

Oct 2017

*Masters Thesis*

- Using three datasets, I implemented classic machine learning methods for the prediction of the bioactivity of molecular compounds towards drug-target analysis.
- I further implemented ensemble methods such as voting and stacked generalization to improve performance of the models. Parameter tuning was utilized for all analysis.

### Facial Recognition Using Artificial Neural Network and Feature Selection

Dec 2014

*Bachelor's Thesis*

- I used Gabor filter for texture analysis.
- I implemented feature extraction and recognition of faces with ANN using Matlab.
